Subject: Save lives by promoting generator safety!

Hello CDC EPIC partners,

Carbon monoxide poisoning is one of the main causes of death after hurricanes. Please share the information below with the people you serve as soon as you can:

1. Always set up a generator at least 20 feet from your house.
2. Follow the advice on this document:
 - a. English: <https://www.cdc.gov/co/pdfs/generators.pdf>
 - b. Spanish: https://www.cdc.gov/co/pdfs/flyers_Spanish.pdf

Safe generator use is not being sufficiently repeated through the media, so we need your help in getting out this information as soon as possible! Encouraging generator safety could help save lives.

Sincerely,

CDC EPIC
