

# Frequently Asked Questions About COVID-19 Vaccines for Children 6 months and Up

## Q: How is the COVID-19 vaccination different for children younger than 12 years old?

A: Children ages 6 months to 11 years old receive a smaller dose of the vaccine than older adolescents and adults according to their age group.

## Q: How do we know that the vaccine is safe and effective for children?

A: Millions of children have received at least one dose of a COVID-19 vaccine and are found to be safe.

## Q: If COVID-19 is mild for most kids, why do they need to be vaccinated?

A: Some children do experience severe symptoms if they get sick from COVID-19. The vaccine is the best way to protect children from getting very sick and from long COVID symptoms

## Q: What are some common side effects?

- A: Side effects are typically mild and may include tiredness or sleepiness, fever, headache, swollen glands (under the armpit) and soreness at the site of the injection. Side effects will only last a few days.
- Call your child's health care provider if you have any concerns about your child's symptoms.

## Q: Once my child is vaccinated, how can I show proof of my child's COVID-19 vaccination?

- A: Each dose of the vaccine your child receives is written on a vaccination card.
- This card is for you to keep and take home with you. You will need to bring this card with you at each vaccine appointment.
- Remember to keep your child's vaccination card in a safe place and keep a copy of it in case the card gets lost.
