Introduction to Crisis and Emergency Risk Communication (CERC)
Six principles of CERC

Fully integrated CERC helps ensure that limited resources are managed well and can do the most good at every phase of an emergency.

1. **Be First:** Crises are time-sensitive. Communicating information quickly is crucial. For members of the public, the first source of information often becomes the preferred source.

2. **Be Right:** Accuracy establishes credibility. Information can include what is known, what is not known, and what is being done to fill in the gaps.

3. **Be Credible:** Honesty and truthfulness should not be compromised during crises.

4. **Express Empathy:** Crises create harm, and the suffering should be acknowledged in words. Addressing what people are feeling, and the challenges they face, builds trust and rapport.

5. **Promote Action:** Giving people meaningful things to do calms anxiety, helps restore order, and promotes some sense of control.

6. **Show Respect:** Respectful communication is particularly important when people feel vulnerable. Respectful communication promotes cooperation and rapport.
Trust and mistrust

- Source credibility has two primary dimensions: expertise & trustworthiness
- Perceived similarity with the source/spokesperson (demographic or attitudinal) can promote trust
- Mistrust is an outgrowth of the perception that promises were broken and values violated
Express empathy

- Acknowledge feelings in words
- Empathy can build trust
- Every message does not need an empathy statement, but the first messages do

*Being quarantined can be disruptive, frustrating, and feel scary. Especially when the reason for quarantine is exposure to a new disease for which there may be limited information.*

- Dr. Nancy Messonnier, CDC telebriefing February 14, 2020
Promote action

Keep action messages simple, short, and easy to remember, like “cover your cough.”

- Taking action calms anxiety and can help restore a sense of control.
- In an infectious disease outbreak, public understanding of and action on disease prevention is key to stopping the spread.
- Self-efficacy is a predictor of behavior
- Altruistic attitudes increase during times of crisis
Preparing & Selecting the Message
Risk perception is not all about the numbers

- Risk = Hazard + Outrage
- All risks are not equally accepted
  - Voluntary or involuntary
  - Natural or human-made
  - Familiar or exotic
  - Affecting adults or affecting children
- Denial – “it won’t happen to me”

As communicators, we don’t seek to remove outrage, but to match the level of outrage to the level of hazard.
Psychological barriers

- Denial
- Fear, anxiety, confusion, dread
- Hopelessness or helplessness

People seldom panic.
**Overcoming psychological barriers**

<tr>
<td>Look for additional information and opinions</td>
<td>Use consistent messages</td>
</tr>
<tr>
<td>Believe the first message</td>
<td>Release accurate messages as soon as possible</td>
</tr>
</tbody>
</table>
Use plain language

- Be brief.
- Give positive action steps.
- Use words your audience uses.
- Use personal pronouns.
Tailor messages

- Identify your audiences and groups within those audiences.
- Continue to base your message on key messages.
- Consider the role of culture in tailoring and sharing your message.
Resources

- CERC resources
- CDC Clear Communication Index
- Everyday Words
- Health Literacy

Getting the Message Out
Work with others to share messages

- When possible, establish relationships before the emergency.
- Seek and accept input from partners.
Promote repetition and consistent messaging

- Share the same message across multiple platforms.
- Coordinate messaging with response partners.

Example: NCFH cooperative agreement with CDC

Resources for Community Health Workers, Community Health Representatives, and Promotores de la Salud

Community health workers (CHWs)—also known as community health representatives and promotores de la salud—provide critical services to communities disproportionately impacted by public health threats including COVID-19. This site provides CHWs with resources to support their work, as well as information for their employers to better ensure the safety of CHWs in the community. State and local health departments also may find these resources beneficial to share with local programs and funding recipients.

Resources from the Centers for Disease Control and Prevention (CDC), federal agencies, and external organizations are included to ensure CHWs and their employers have easy access to essential information in one location.

Rapid Community Assessment Guide

- Identify communities at risk for low COVID-19 vaccine uptake
- Inform future phases of the COVID-19 vaccine rollout
- Get an early understanding of what communities are thinking about COVID-19 vaccines
- Plan for potential solutions to increase confidence and uptake
- Identify community leaders, trusted messengers, and other important channels through which you can reach communities
- Identify areas of intervention and prioritize potential intervention strategies to increase confidence in and uptake of COVID-19 vaccine

# Communication Resources

</tr>
</tbody>
</table>

Agricultural Workers and Employers

- Exposure risk
- Create an assessment and control plan
- Special considerations for shared housing & transportation
- Special considerations for children
